PORTFOLIO

miguelabf-devops.com

SKILLS

CI/CD & GitOps

GitLab CI/CD, GitHub Actions, Jenkins, ArgoCD, GitOps

Containers & Orchestration

Kubernetes, Helm, kubeadm, k3s, Docker, Containerd, Proxmox VE

Networking

Cilium (eBPF), MetalLB, Traefik, Nginx, Cloudflare, Gateway API

Storage & Registry

Longhorn, Harbor, Trivy, Nexus 3, JFrog

Cloud

AWS, GCP, DigitalOcean, Oracle Cloud Infrastructure

IaC & Configuration

Terraform, Ansible

Observability

Prometheus, Grafana, Alertmanager, node-exporter, LitmusChaos

Languages

Python, Bash, JavaScript, Perl, C#

Other

Git, GitLab, MongoDB, Linux, WebLogic, Apex

CERTIFICATIONS

- ▶ AWS Certified Cloud Practitioner *Amazon Web Services*
- ▶ Certified Kubernetes Administrator *CNCF — In Progress*

PROFILE

DevOps Engineer with hands-on experience building and operating Kubernetes platforms, GitOps pipelines, and self-hosted infrastructure. Background in Site Reliability Engineering at Oracle, where I led observability initiatives and built internal CI/CD pipelines. Strong bias for automation and declarative infrastructure — if I'm doing something twice, I'm building a pipeline for it. Currently building a production-grade homelab platform to sharpen DevOps skills and demonstrate them publicly.

EXPERIENCE

Site Reliability Developer II · Oracle

Jan 2024 — Mar 2026

Guadalajara, MX

- ▶ Deployed Prometheus + Grafana stack in containers to provide full observability across the team's server fleet — first monitoring solution the team had.
- ▶ Built CI/CD pipelines in GitLab for internal services, reducing manual deployment steps across multiple applications.
- ▶ Developed Ansible playbooks for team server inventory and configuration management.
- ▶ Wrote scripts to automate repetitive operational tasks, improving team efficiency.
- ▶ Designed and executed recovery plans for critical internal services.
- ▶ Improved server stability by identifying and fixing security vulnerabilities.
- ▶ Maintained and hardened Linux servers running internal Oracle applications.
- ▶ Proposed and introduced new tooling to strengthen infrastructure reliability.

T E C H Git · GitLab · Bash · WebLogic · Ansible · Apex · Python · OCI · Docker · Prometheus · Grafana · Perl

Software Development Lead · Servicios Veterinarios Eläin Oct 2023 — Feb 2024

Guadalajara, MX

Lead engineer for a veterinary clinic business website — owned design, planning, and end-to-end delivery while mentoring a frontend apprentice on Agile methodologies and Git workflow.

- ▶ Managed GCP infrastructure and network configuration for the production deployment.
- ▶ Developed automated CI/CD pipelines with GitHub Actions for the development environment.
- ▶ Containerized the application with Docker and deployed it behind Nginx.
- ▶ Mentored a frontend apprentice on Agile, Git branching, and ticket-based workflow.
- ▶ Owned direct client interaction, scoping, and final product delivery.

T E C H GitHub Actions · Docker · GCP · Node.js · React · HTML5 · Git · Nginx

Junior DevOps Engineer · Grid Dynamics

Dec 2022 — Jan 2024

Guadalajara, MX

Worked across three internal DevOps projects covering CI/CD, Kubernetes cluster management, cloud migrations, monitoring, and multi-platform pipelines.

DevOps Project 1 — Main (Jun — Dec 2023)

- ▶ Configured a local k3s cluster and deployed Nexus 3, MongoDB Replica Set, SonarQube, Prometheus, and Grafana via Helm.
- ▶ Built CI/CD pipelines from scratch for frontend (React), backend (Python), Android (Kotlin), and iOS (Xcode).
- ▶ Migrated full stack from GCP serverless to a local Kubernetes cluster.
- ▶ Configured networking, Ingress, and Traefik for all services; ran chaos experiments with LitmusChaos.

DevOps Project 2 (Aug 2023 — Jan 2024)

- ▶ Built a multi-stage Docker image for a Python service and the full CI/CD pipeline.
- ▶ Created a Kubernetes CronJob and integrated artifact publishing to a self-hosted Nexus 3 repository.

EDUCATION

Bachelor in Mechatronics Engineering
Tecnológico de Monterrey (ITESM)

LANGUAGES

English **C1**
Spanish **Native**

VOLUNTEER

Sustainable Farming · Finland
Animal welfare and community engagement on a working farm.

Autism Support Volunteer
Sensory and social-skill activities with children.

DevOps Project 3 (Jun – Aug 2023)

- Created GitLab Runners and developed the complete pipeline for a React web application.
- Set up a JFrog repository and a Jenkins server on Kubernetes; built an action plan for AWS infrastructure.

T E C H Kubernetes (k3s) · Helm · GitLab CI/CD · GCP · DigitalOcean · Docker · Terraform · Prometheus · Grafana · LitmusChaos · Traefik · Jenkins · JFrog · Bash · Python

Cloud Engineer Intern · Assetel

Jan 2018 — Nov 2018

Guadalajara, MX

- Assisted the lead engineer with server troubleshooting and remote monitoring.
- Visited the company data center to ensure operational order across server racks.
- Wrote automation scripts for log processing and server health checks.
- Supported cross-department IT (accounting, finance, office network).

T E C H Windows Server · Linux · Bash · Networking

PROJECTS

🛡 Self-Hosted DevOps Platform on Kubernetes

github.com/MiguelABFlores/homelab-gitops · miguelabf-devops.com

Production-grade, GitOps-managed Kubernetes platform on a 5-node cluster (1 control plane + 4 workers) bootstrapped with kubeadm on Proxmox VE — Intel i5-13500H, 32 GB RAM.

- Entire cluster state declared in Git, reconciled by ArgoCD App-of-Apps — drift self-heals in ~30 seconds, zero manual kubectl apply post-bootstrap.
- Cilium CNI with eBPF networking + MetalLB bare-metal LoadBalancer; Traefik v3 ingress with Gateway API support.
- Longhorn distributed block storage with 3-way replication across worker nodes.
- Harbor self-hosted registry with Trivy vulnerability scanning; multi-arch image builds (linux/amd64 + linux/arm64) via docker buildx.
- kube-prometheus-stack: Prometheus + Grafana (30+ dashboards) + Alertmanager for full cluster observability.
- Cloudflare Tunnel for zero-trust public exposure — no open inbound ports on the home network.
- Portfolio site itself is deployed on this cluster via GitOps (meta).

T E C H Kubernetes · ArgoCD · GitOps · Helm · Cilium · MetalLB · Traefik · Longhorn · Harbor · Trivy · Prometheus · Grafana · Alertmanager · Proxmox VE · Docker · Cloudflare · Linux · kubeadm

◆ Eläin — Vet Services Website

github.com/MiguelABFlores/vet-services-website

Production website for a veterinary clinic in Guadalajara. Designed, planned, and led delivery end-to-end — React frontend containerized with Docker, deployed on GCP behind Nginx with a fully automated GitHub Actions pipeline. Mentored a frontend apprentice through the project.

T E C H React · Node.js · Docker · GCP · GitHub Actions · Nginx

◆ Demo Metroidvania

github.com/MiguelABFlores/demo-metroidvania

A 2D Metroidvania demo built in the Unity engine with C#. Personal project showing the creative side outside of infrastructure — game mechanics, level design, and a CI/CD-style build flow for Unity.
